

Cover Letter

Dear Databricks Design Team,

I'm excited to apply for the Senior Product Designer, AI/BI role at Databricks. Throughout my career, I've focused on designing complex technical systems and transforming them into intuitive experiences. Databricks' mission to help people understand and act on data through AI resonates strongly with the work I've been doing for the past several years.

As a product designer specializing in complex platforms, I have spent the last few years designing UX for machine learning and cloud-based systems, working closely with engineers, product managers, and data practitioners. My work has focused on making advanced workflows—such as experimentation, model evaluation, and data exploration—clear, structured, and accessible to users with varying levels of technical expertise.

One of my most impactful projects involved designing the user experience for an ML platform used by data scientists and engineers. I led the UX architecture for workflows including notebooks, experiment tracking, and model evaluation. This required translating complex technical processes into interfaces that supported exploration, comparison, and decision-making while maintaining clarity and scalability across the platform.

What excites me most about Databricks is the challenge of designing how humans and AI think together. I'm particularly interested in the intersection of natural language interfaces, AI-assisted analytics, and collaborative data exploration. Designing experiences that help users move from data exploration to insight and action is a problem space where thoughtful UX can have enormous impact.

I bring a strong systems-thinking mindset to design. I enjoy breaking down complex problems into coherent product structures, defining interaction patterns for scalable platforms, and collaborating deeply with engineering to ensure designs can evolve incrementally with the product.

I would be thrilled to contribute my experience in AI platforms, complex workflows, and enterprise UX to help shape the future of Databricks' AI-driven analytics tools.

Thank you for your time and consideration. I look forward to the opportunity to discuss how my experience could contribute to the Databricks design team.

Best regards,

Nastya Shendrik
